The event is free of charge. Registration needed

To apply/register: segreteria@cotec.it

NetMIB

The project while developing entrepreneurial capacity aims at providing answers to current socio-economic problems by generating relevant business ideas on the part of university students. By internationally interconnecting the participating HEIs' (High Education Institutions) ideation and business model generation practices in the framework of the NetMIB significant intercultural, cross industrial, and multidisciplinary benefits will arise on the parts of all participants.

The project also intends to establish a transnational entrepreneurship ecosystem that can support the development of entrepreneurial skills of participating persons (students, faculty members, business professionals, public servants, etc.), while creating innovative solutions that are able to solve regional, national or international socio-economic problems.
